Risk Ledger

Transforming traditional Vendor Risk Management

Review a vendor in under 2 hours, get deeper supply chain visibility, and coordinate threat response with network peers.

Standardize supplier assessments

Suppliers complete one security profile, update it regularly, and share it with every client across the network. These assessments align with key regulations and frameworks.

Visualize your supplier network

See the vendors behind your vendors. Every supplier is added to your network map, showing your supply chain as it truly exists. Uncover hidden nth-party relationships and concentration risks.

Detect and respond

Know your exposure in hours, not days. When new threats occur, get updates from suppliers to understand your supply chain exposure and proactively respond to risks.

Defend as One

Stronger together: Work with 19,000+ suppliers and network partners to share intelligence, respond to incidents, and strengthen your supply chain.
